NEW & IMPROVED

LIGHT MATE

LIGHT MATE®

ECS LightMate II - For reliable and easy testing of taillight functions

The testing of taillight functions remains an important issue after a towbar wiring kit is installed. The ECS LightMate II supplies the most reliable solution for this matter. This testing device is able to check the towing, electric and light functions on all modern vehicles and trailers in an easy way. The advanced ECS LightMate II can simulate the detection of a trailer or caravan which simplifies the searching and solving of failures considerably. The simulation of taillight functions on vehicles with older (boat)trailers and caravans with high voltage drop can also be carried out fully and reliable. Not only older trailers or caravans can be tested, also new models with LED-lights can easily be tested. This shows that the LightMate II is ready for the future.

ECS Electronics has improved her existing model in order to live up to the users demand even more. With this improved version we expect to deliver a product which is the perfect testing tool.

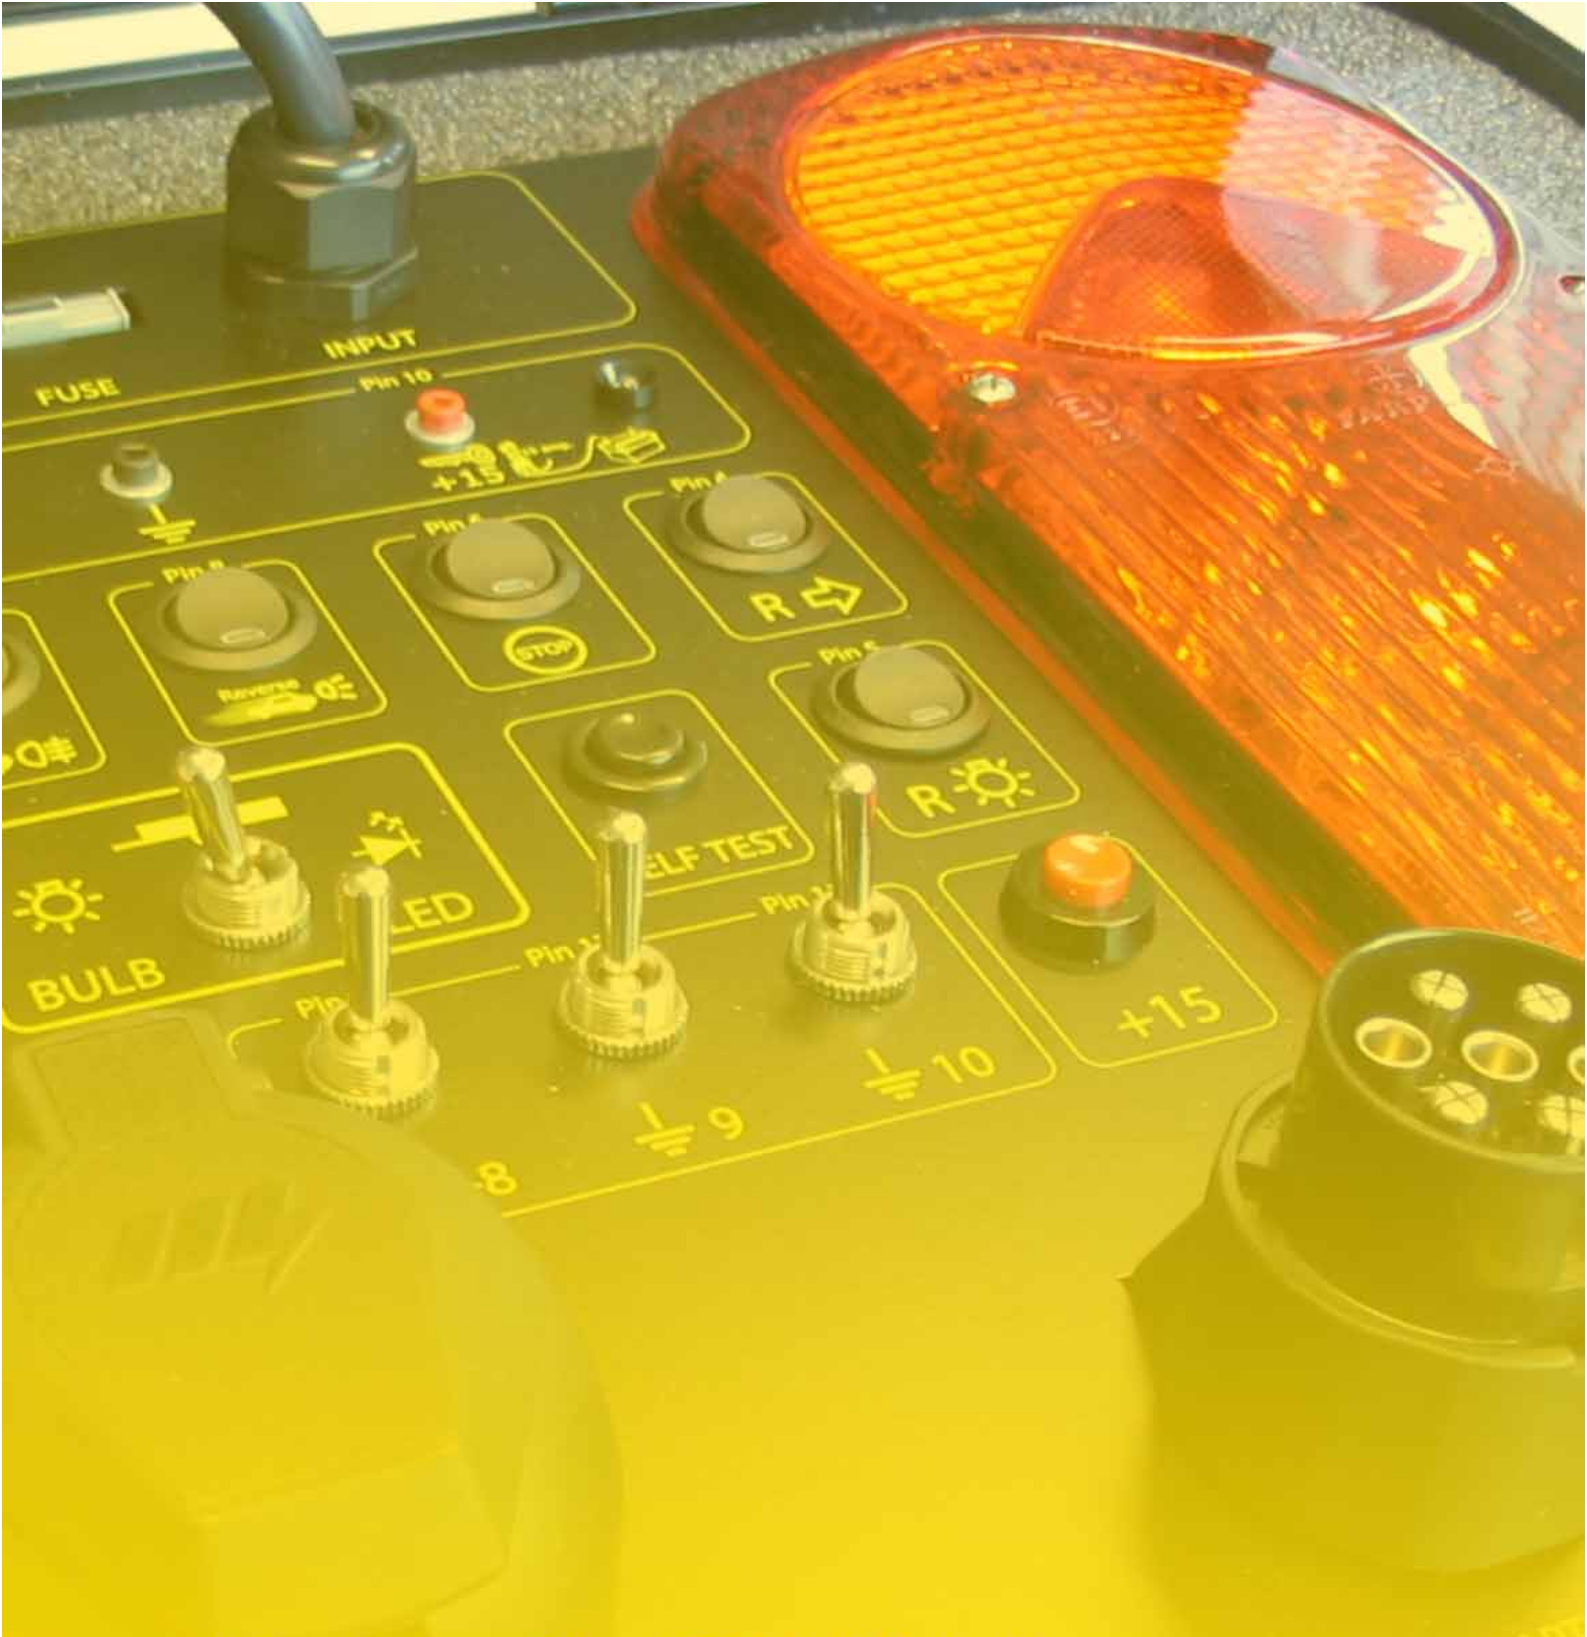

The LightMate version II has the following features:

- A new solid, plastic suitcase for maximum protection
- The robustness of switches is improved for use in any environment
- The suitcase is enlarged which makes it easier to store accessories
- The changed design of the 13-pin plug simplifies connecting and disconnecting
- The property of the testing device to create a voltage drop
- The new model is provided with an automatic fuse

With this new testing instrument the diagnosis is quick and simple. By implementing these new features into the LightMate II ECS has created the ultimate tool for you and your customer.

IMPROVED LAYOUT

Advantages of the ECS LightMate II:

- highly user friendly
- developed and designed by ECS, specially for towbar wiring kit electronics
- car-electronics are simply to understand
- compact, solid and easy to handle
