

VEHICLE CODING

VEHICLE CODING HAS NEVER BEEN EASIER

In collaboration with AutoNiveau we offer you a solution for vehicle coding, after the installation of an ECS towbar wiring kit.

WHAT IS IT?

With this online platform, the vehicle in your workshop gets connected to our service centre and will be coded remotely by diagnostic professionals. This saves you a lot of time and effort. In addition, there is no need for investing in expensive coding tools, software updates and annual fees. With our service you pay one fixed rate per coding session. Because the service centre has access to multiple coding tools, this is the most complete solution in the market. Additional services such as programming key transponders, coding batteries and resetting service intervals are also possible.

The remote can be purchased separately or as a pro-package, including a Samsung tablet and professional case with custom cut foam inserts for the safe storing of the remote and tablet.

WHAT DO YOU NEED?

To make use of this service, the only thing you need is our remote. This interface can be connected with your own Android device, or with the Samsung tablet which is included in the ECS vehicle coding pro-package.

HOW DOES IT WORK?

Coding the vehicle after the installation of a towbar wiring kit has never been easier. You can now complete this procedure in three easy steps.

STEP 1

Connect the remote to the EOBD-connector in the vehicle and to the tablet, which will connect to the internet by Wi-Fi or 3G / 4G. The app will start automatically.

STEP 2

In the app, simply select the vehicle you want to have coded. The service centre will receive your request and start the coding session.

STEP 3

As soon as the coding session is finished, you will be informed via the app and the vehicle itself (through a light signal or horn). You will receive the invoice in your account. Only successful coding sessions will be charged.

ECS vehicle coding is powered by AutoNiveau

Founded in 2005, AutoNiveau aims to support companies in the automotive industry. Since then, numerous types of training have been developed and provided for various importers, dealers and universal car companies. Because of our open and clear way of communicating, many companies are now customers of AutoNiveau and close partnerships have been set up with various partners. Thanks to these new collaborations, our services have been further expanded with a technical helpdesk to support companies even better.

ECS Electronics is an established international company specialised in development, manufacturing, validation and marketing of premium quality electronic connection systems for the automotive industry.

Our product portfolio includes solutions for automotive accessories, vehicle telematics and test & diagnostic equipment. In addition, by maintaining a flexible automotive manufacturing base and our own in-house Research & Development and Electronics departments, we are able to deliver customised solutions.

With over 30 years of continued improvement, we are the number one supplier of vehicle specific towbar connection systems in the European market.

From our production plants in The Netherlands and Vietnam we provide cutting-edge products to more than 20 of the biggest automotive original equipment and aftermarket brands around the world.
